To ensure a safe food supply, the Food and Drug Administration (FDA) oversees the use of animal medications. Some medications have been approved for use without a veterinarian’s permission, while others require permission. Recently, the FDA changed how some antibiotic medications, which are important to human medicine, are used for animal feed. **After January 1, 2017, these medications will require a Veterinary Feed Directive (VFD) order to be used in medicated feed.**

**What is a medicated feed and why is it used?**

Medicated feed is feed with a drug added to it. Medicated feed is fed to animals to prevent illness or treat an animal when it is sick. Medicated feeds are just one of the good animal care and well-being practices farmers and animal owners use to keep their animals healthy.

**Is all feed medicated?**

No, when you purchase feed, you have the option to buy feed without medications mixed into it.

**Who is impacted by these changes?**

Livestock owners, including youth with animal projects, who have decided to feed their animals medicated feeds.

What is a Veterinary Feed Directive?
A Veterinary Feed Directive (VFD) is an order from a veterinarian that gives permission for you to order or buy medicated feed containing certain drugs.

What is a VFD drug and why did the FDA change their process?
A VFD drug is an antibiotic used for both human and animal medicine. FDA regulates both human and animal drugs, and the VFD changes are FDA’s response to concerns about production uses of antibiotics in animals. Going forward, the antibiotics used in animals and humans will only be allowed to control or prevent disease, not for production uses, such as increased rate of gain.

Are all antibiotics affected?
No, not all antibiotics will be considered VFD drugs. The use of injectable antibiotics will not be affected; and some drugs used in water will now require a prescription from a veterinarian.

How does a VFD order work?
A VFD order is similar to a prescription you would get from your human doctor, however a veterinarian will be giving you a VFD order for a medicated feed. VFDs are not prescriptions; a prescription requires a pharmacist, a VFD does not require a pharmacist.

How do you get a VFD order?
To get a VFD order, you must have an established veterinarian-client-patient relationship (VCPR) with a veterinarian. A VCPR means a veterinarian and a person who raises livestock (client) regularly work together to attend to the health of the client’s animals, where the veterinarian regularly visits and provides advice about proper medication of the animals.

How do you get a VFD order?
